Draft Version 1.4	6 th Jan 2014	Cheshire and Merseyside CSU on behalf of CCGs	DRAFT	Minor wording changes made following legal advise

Introduction

The Cheshire and Merseyside CCGs are legally obliged to have in place and publish arrangements for making decisions and adopting policies on whether particular health care interventions are to be made available in Cheshire and Merseyside. This document is intended to be a statement of such arrangements made by the Cheshire and Merseyside CCGs and act as a guidance document for patients, clinicians and other referrers in primary and secondary care. It sets out the eligibility criteria under which Cheshire and Merseyside CCGs will commission the service, either via existing contracts or on an individual basis. It gives guidance to referrers on the policies of the CCGs in relation to the commissioning of procedures of low clinical priority, thresholds for certain treatment and those procedures requiring individual approval.

In making these arrangements, the Cheshire and Merseyside CCGs have had regard to relevant law and guidance, including their duties under the National Health Service Act 2006, the Health and Social Care Act 2012 and the National Health Service Commissioning Board and Clinical Commissioning Groups (Responsibilities and Standing Rules) Regulations 2012; the Joint Strategic Needs Assessment; and relevant guidance issued by NHS England.

The Cheshire and Merseyside CCGs have a duty to secure continuous improvement in the quality of services and patient outcomes, but are also under a duty to exercise their functions effectively, efficiently and economically. Therefore, health benefits must be maximised from the resources available. As new services become available, demand increases and procedures that give maximum health gain must be prioritised. This means that certain procedures will not be commissioned by CCGs unless exceptional clinical grounds can be demonstrated. The success of the scheme will depend upon commitment by GPs and other clinicians to restrict referrals falling outside this protocol.

The NHS standard contract specifies that the Co-ordinating Commissioner will agree with the Provider the circumstances where the Provider will need to seek prior approval (PA) to confirm the appropriateness of a proposed intervention or course of treatment. It is expected that such schemes focus on procedures of limited/low clinical effectiveness, or infrequent high cost and/or complex procedures. In designing and implementing PA schemes, individual patient needs must remain paramount. (Reference Guidance on the Standard NHS contract for Acute Hospital Services, community and Mental Health & Learning Disabilities.

Ideally the Co-ordinating Commissioner will agree a single set of PA requirements with which each Provider is expected to comply. However, there may be exceptional circumstances in which an Associate CCG needs to specify its own PA requirements. Agreeing a Cheshire and Merseyside Prior Approval Policy will improve equity of access to services, value for money and clinical effectiveness across the network.

CCGs will not pay for activity unless it meets the criteria set out in the document or individual approval has been given and the Referral and Approval Process as set out has been followed. This prior approval scheme will be incorporated into all NHS standard NHS contracts agreed by CCGs. Compliance with this policy will be monitored via regular benchmarking reports and case note audits.

To support this approach a set of Core Clinical Eligibility Criteria have been developed and are set out below, patients may be referred in accordance with the referral process if they meet these criteria. In some limited circumstances, a 'Procedure of Lower Clinical Priority' (PLCP) may be the most clinically appropriate intervention for a patient. In these circumstances, agreed eligibility criteria have been established and these are explained, in the later sections of the document, if the criteria are met the procedure will be commissioned by the CCG.

Core Clinical Eligibility

Patients may be referred in accordance with the referral process where they meet any of the following Core Clinical Eligibility criteria:

- All NICE Technology Appraisals will be implemented.
- In cancer care (including but not limited to skin, head and neck, breast and sarcoma) any lesion that has features suspicious of malignancy, must be referred to an appropriate specialist for urgent assessment under the 2-week rule.
- Reconstructive surgery post cancer or trauma including burns.
- Congenital deformities: Operations on congenital anomalies of the face and skull are usually available on the NHS. Some conditions are considered highly specialised and are commissioned in the UK through the National Specialised Commissioning Advisory Group (NSCAG). As the incidence of some cranio-facial congenital anomalies is small and the treatment complex, specialised teams, working in designated centres and subject to national audit, should carry out such procedures.
- Tissue degenerative conditions requiring reconstruction and/or restoring function e.g. Leg ulcers, dehisced surgical wounds, necrotising fasciitis.
- Any patient who needs urgent treatment will always be treated.
- No treatment is completely ruled out if an individual patient's circumstances are exceptional. Requests for consideration of exceptional circumstances should be made to the patients responsible CCG – see the exceptionality criteria in this policy and the contact details at Appendix 1.
- Children under 16 years are eligible for surgery to alter appearance, improve scars, excise facial or other body lesions, where such conditions cause obvious psychological distress.

Referral and Approval Process

Interventions specified in this document are not commissioned unless clinical criteria are met, except in exceptional circumstances. Where clinical criteria are met treatment identified will form part of the normal contract activity.

If a General Practitioner/Optometrists/Dentist considers a patient might reasonably fulfil the eligibility criteria for a Procedure of Lower Clinical Priority, as detailed in this document (**i.e. they meet the specific criteria listed for each treatment**) the General Practitioner/Optometrists/Dentist should follow the process for referral. If in doubt over the local process, the referring clinician should contact the General Practitioner. Failure to comply with the local process may delay a decision being made. The referral letter should include specific information regarding the patient's **potential** eligibility.

Diagnostic procedures to be performed with the sole purpose of determining whether or not a Procedure of Lower Clinical Priority is feasible **should not** be carried out unless the eligibility criteria are met or approval has been given by the CCG or GP (as set out in the approval process of the patients responsible CCG) or as agreed by the CCG as an exceptional case.

The referral process to secondary care will be determined by the responsible CCGs. Referrals will either:

- Have been prior approved by the CCG.
OR
- Clearly state how the patient meets the criteria.
OR
- Be for a clinical opinion to obtain further information to assess the patient's eligibility.

GPs should not refer unless the patient clearly meets the criteria as this can raise unrealistic expectations for the patient and lead to disappointment. In cases where there may be an element of doubt the GP should discuss the case with the IFR Team in the first instance.

If the referral letter does not clearly outline how the patient meets the criteria then the letter should be returned to the referrer for more information and the CCG notified. Where a GP requests only an opinion the patient should not be placed on a waiting list or treated, but the opinion given to the GP and the patient returned to the GP's care, in order for the GP to make a decision on future treatment.

The secondary care consultant will also determine whether the procedure is clinically appropriate for a patient and whether the eligibility criteria for the procedure are fulfilled or not and may request additional information before seeing the patient. Patients who fulfil the criteria may then be placed on a waiting list according to their clinical need. The patient's notes should clearly reflect exactly how the criteria were fulfilled, to allow for case note audit to support contract management. Should the patient not meet the eligibility criteria this should be recorded in the patient's notes and the consultant should return the referral back to the GP with a copy to the CCG, explaining why the patient is not eligible for treatment.

Should a patient not fulfil the clinical criteria but the referring clinician is willing to support the application as **clinically exceptional**, the case can be referred to the IFR Team for assessment contact details for the IFR team can be found in Appendix 1.

Exceptionality

In dealing with exceptional case requests for an intervention that is considered to be a poor use of NHS resources, the Cheshire & Merseyside CCGs have endorsed through the CCG Alliance the following description of exceptionality contained in a paper by the NW Medicines and Treatment Group:

*The patient has a clinical picture that is significantly different to the general population of patients with that condition **and as a result of that difference;** the patient is likely to derive greater benefit from the intervention than might normally be expected for patients with that condition.*

Further details on exceptionality can be found at this link:

<http://www.nhsconfed.org/Publications/Documents/Priority%20setting%20managing%20individual%20funding%20requests.pdf>

The Cheshire & Merseyside CCGs are of the opinion that exceptionality should be defined solely in clinical terms. To consider social and other non-clinical factors automatically introduces inequality, implying that some patients have a higher intrinsic social worth than others with the same condition. It runs contrary to a basic tenet of the NHS namely, that people with equal need should be treated equally. Therefore non-clinical factors will not be considered except where this policy explicitly provides otherwise.

In essence, exceptionality is a question of equity. The CCG must justify the grounds upon which it is choosing to fund treatment for a particular patient when the treatment is unavailable to others with the condition.

Psychological Distress

Psychological distress alone will not be accepted as a reason to fund surgery except where this policy explicitly provides otherwise. Psychological assessment and intervention may be an appropriate intervention for patients with severe psychological distress in respect of their body image but it should not be regarded as a route into aesthetic surgery.

Unless specifically stated otherwise in the policy any application citing psychological distress will need to be considered as an IFR and will need to be supported by a current psychological assessment, which specifically addresses current and prior engagement with appropriate psychological or psychiatric treatment. Only very rarely is surgical intervention likely to be the most appropriate and effective means of alleviating disproportionate psychological distress. In these cases ideally an NHS psychologist with expertise in body image or an NHS mental health professional (depending on locally available services) should detail all treatment(s) previously used to alleviate/improve the patient's psychological wellbeing, their duration and impact. The clinician should also provide evidence to assure the IFR Panel that a patient who has focused their psychological distress on some particular aspect of their appearance is at minimal risk of having their coping mechanism removed by inappropriate surgical intervention.

Personal Data (including Photographs)

In making referrals to the IFR Team, clinicians and other referrers in primary and secondary care should bear in mind their obligations under the Data Protection Act 1998 and their duty of confidence to patients. Where information about patients (including photographs) is sent to the IFR Team and is lost or inadvertently

disclosed to a third party before it is safely received by the IFR Team, the referrer will be legally responsible for any breach of the Data Protection Act 1998 or the law of confidence.

Therefore, please consider taking the following precautions when using the Royal Mail to forward any information about patients including photographic evidence:

- Clearly label the envelope to a named individual i.e. first name & surname, and job title.
- Where your contact details are not on the items sent, include a compliment slip indicating the sender and their contact details in the event of damage to the envelope or package.
- Use the Royal Mail Signed for 1st Class service, rather than the ordinary mail, to reduce the risk of the post going to the wrong place or getting lost.

Medicines Management

Prior approval for treatment should always be sought from the responsible Medicine Management Team when using medicines as follows:

- Any new PbR excluded drug where the drug has not yet been approved / prioritised for use in agreement with the local CCG.
- Any existing PbR excluded drugs to be used outside of previously agreed clinical pathways/indication.
- Any PbR excluded drugs that are being used out with the parameters set by NICE both in terms of disease scores or drug use. It must not be assumed that a new drug in the same class as one already approved by NICE can be used, this must be subject to the process in Point 1.
- Any drug used out with NICE GUIDANCE (where guidance is in existence).
- Any proposed new drug / new use of an existing drug (whether covered by NICE or PBR excluded or not) should first be approved by the relevant Area Medicines Management Committee, and funding (where needed) agreed in advance of its use by the relevant CCG.
- Any medicines that are classed by the CCG as being of limited clinical value.
- Any medicines that will be supplied via a homecare company agreement.

The Clinical Commissioning Group does not expect to provide funding for patients to continue treatment commenced as part of a clinical trial. This is in line with the Medicines for Human Use (Clinical Trials) Regulations 2004 and the Declaration of Helsinki which stipulates that the responsibility for ensuring a clear exit strategy from a trial, and that those benefiting from treatment will have on-going access to it, lies with those conducting the trial. This responsibility lies with the trial initiators indefinitely

NOTE: For all cancer drugs (haematology and oncology) a revised process and prioritised list has been developed.

In 3rd quarter of each year, specialists will be asked to nominate drugs which they would like to be considered within the prioritisation process. The Northwest Cancer Prioritisation Steering group (attended by representatives from the three cancer networks, specialised commissioning and CCG representatives) co-ordinate the requests and create a single list. This list is reviewed and scored at two prioritisation meetings which are held across the region. Prioritisation will be

© Cheshire and Merseyside Commissioning Support Unit 2013.

completed in the 4th quarter of each year prior to being submitted to the commissioning process, with recommendations rated as red (not for routine IFRs or funding), amber (IFRs may be submitted in certain circumstances) or green (for routine funding). Any drug requested outside of this prioritisation process will not routinely be funded by any CCG in-year.

DRAFT

Conditions & Interventions

The conditions & interventions have been broken down into speciality groups.

GPs should only refer if the patient meets the criteria set out or individual approval has been given by the CCG as set out in the CCGs process as explained above. Requests for purely cosmetic surgery will not be considered except where this policy explicitly provides otherwise. Patients meeting the core clinical eligibility criteria set out above can be referred, all other referrals should be made in accordance with the specified criteria and referral process. The CCG may request photographic evidence to support a request for treatment.

From time to time, CCGs may need to make commissioning decisions that may suspend some treatments/criteria currently specified within this policy.

For the purposes of engagement process only, this policy includes under the comments the following key to assist readers in understanding the proposed change.

Key	Description
Red	Important change
Amber	Criteria changes.
Green	Minor word or no changes made.
New Statement	New -Important change
New Statement	New – Moderate Change
New Statement	New - No important Impact

]

	Treatment/ Procedure	Exceptionality - Prior Approval - Criteria	Evidence	Comments
1.	<i>Bariatric</i>			
1.1	Bariatric Surgery for Weight Management.	Please see local policies and pathways for criteria.	<p>IPG432: Laparoscopic gastric plication for the treatment of severe obesity NICE (2012).</p> <p>Treatment of Obesity The Cochrane Library (2012).</p> <p>Surgery for obesity – Cochrane Metabolic and Endocrine Disorders Group (2009).</p> <p>Commissioning Guide: Weight Assessment and Management Clinics Royal College of Surgeons (2013).</p>	<p>All CCG local primary care pathways differ. After completion of local pathway patients will be referred for surgery if appropriate without needing prior approval. Surgery is then commissioned by NHS England at designated providers and sits outside of this policy.</p> <p>In exceptional circumstances where it is thought the usual process should not be followed an IFR request should be made to NHS England.</p> <p>In the case of revisional bariatric surgery beyond the usual follow-up period this should be discussed with the IFR team.</p>

	Treatment/ Procedure	Exceptionality - Prior Approval - Criteria	Evidence	Comments
2.	Complementary Therapies			
2.1	Complementary Therapies including Homeopathy	Not routinely commissioned unless recommended by NICE guidance.	Complementary and alternative medicine – NHS Choices 2012.	
3.	Dermatology			
3.1	Skin Resurfacing Techniques (including laser dermabrasion and chemical peels)	<p>Only be commissioned in the following circumstances:</p> <p>Severe scarring following:</p> <ul style="list-style-type: none"> • acne once the active disease is controlled. • chicken pox. Or • trauma (including post-surgical). <p>Procedures will only be performed on the head and neck area..</p>	<p>Modernisation Agency's Action on Plastic Surgery 2005.</p> <p>Hædersdal, M., Togsverd-Bo, K., & Wulf, H. (2008). Evidence-based review of lasers, light sources and photodynamic therapy in the treatment of acne vulgaris. <i>Journal of the European Academy of Dermatology and Venereology</i>, 22, 267–78.</p> <p>Department of Dermatology, Bispebjerg Hospital, University of Copenhagen, Copenhagen, Denmark. Collated on NHS evidence website suggests that short-term efficacy from optical treatments for acne vulgaris with the most consistent outcomes for PDT.</p> <p>www.evidence.nhs.uk</p>	
3.2	Surgical or Laser Therapy treatments for Minor Skin Lesions.	<p>Will be commissioned in any of the following circumstances:</p> <ul style="list-style-type: none"> • Symptomatic e.g. ongoing pain or functional impairment. 	Procedures of Limited Clinical Effectiveness Phase 1 - Consolidation and repository of the	Uncomplicated benign skin

	Treatment/ Procedure	Exceptionality - Prior Approval - Criteria	Evidence	Comments
	<p>E.g. benign pigmented moles, milia, skin tags, keratoses (basal cell papillomata), sebaceous cysts, corn/callous dermatofibromas, comedones, molluscum contagiosum chalazion</p> <p>Surgical treatment for removal of Lipoma in Secondary Care..</p>	<ul style="list-style-type: none"> • Risk of infection. • Significant facial disfigurement. • All vascular lesions on the face except benign, acquired vascular lesions such as thread veins. <p>Will only be commissioned where severely functionally disabling and/ or subject to repeated trauma due to size and/or position. Lipomas that are under 5cms should be observed only unless the above applies.</p>	<p>existing evidence-base - London Health Observatory 2010.</p> <p>Modernisation Agency's Action on Plastic Surgery 2005.</p> <p>Health Commission Wales. 2008 Commissioning Criteria – Plastic Surgery. Procedures of Low Clinical Priority/ Procedures not usually available on the National Health Service</p> <p>Noninvasive lipoma size reduction using high-intensity focused ultrasound – Dermatologic Surgery 2013 Oct;39(10):1446-51.</p>	<p>lesions should NOT be referred.</p> <p>Send suspected malignancy on appropriate pathway.</p> <p>Consider if benefit out weighs risk associated with surgery. Consider Primary Care or community service.</p> <p>Lipomas located on the body that are over 5cms in diameter, or in a sub-fascial position, which have also shown rapid growth and are painful should be referred to an appropriate skin cancer clinic. There is argument to remove lipomas when they are smaller as this is easier and could be done in a community setting.</p>
3.3 NEW	Treatments for Hypo-pigmentation	NHS Cosmetic Camouflage is commissioned. This is provided by Changing Faces formerly the Red	No guidance found. http://www.changingfaces.org.uk/Skin-Camouflage	Initially the recommended NHS suitable treatment for hypo –

	Treatment/ Procedure	Exceptionality - Prior Approval - Criteria	Evidence	Comments
		Cross		pigmentation is biopsy of suspicious lesions only. Access to a qualified camouflage beautician should be available on the NHS for Cosmetic Camouflage and other skin conditions requiring camouflage.
3.4	Surgical Laser therapy for Viral Warts (excluding Genital Warts) from secondary care providers.	<p>Will be commissioned in any of the following circumstances:</p> <ul style="list-style-type: none"> • Severe Pain substantially interfering with functional abilities. • Persistent and spreading after 2 years and refractive to at least 3 months of primary care or community treatment. Or • Extensive warts (particularly in the immune-suppressed patient). • Facial warts. <p>Patients with the above exceptional symptoms may need specialist assessment, usually by a dermatologist.</p>	<p>Modernisation Agency's Action on Plastic Surgery 2005.</p> <p>Nongenital warts: recommended approaches to management Prescriber 2007 18(4) p33-44.</p> <p>Health Commission Wales. 2008 Commissioning Criteria – Plastic Surgery. Procedures of Low Clinical Priority/ Procedures not usually available on the National Health Service</p> <p>patient.co.uk/doctor/viral-warts-excluding-verrucae</p> <p>http://www.patient.co.uk/doctor/verrucae</p>	Most viral warts will clear spontaneously or following application of topical treatments. 65% are likely to disappear spontaneously within 2 years. There are numerous OTC preparations available. Community treatments such as cryosurgery, curettage, prescription only topical treatment should be considered before referral to secondary care
4	Diabetes			
4.1 NEW	Continuous Glucose Monitoring Systems for Continuous Glucose Monitoring in Type 1 Diabetes Mellitus.	Evidence to support the use of Continuous Glucose Monitors (CGM) is limited. CGM will not be routinely commissioned.	<p>Continuous glucose monitoring systems for type 1 diabetes mellitus – Cochrane Database of Systematic Reviews, 2012.</p> <p>Beneficial effect of real-time continuous glucose monitoring system on glycaemic control in type 1 diabetic patients: systematic review and meta-analysis of randomized trials.</p>	There is some evidence that CGM may be beneficial for a narrow group of young children on insulin pump therapy who despite optimal conventional monitoring are difficult to control and experience severe hypoglycaemic

	Treatment/ Procedure	Exceptionality - Prior Approval - Criteria	Evidence	Comments

	Treatment/ Procedure	Exceptionality - Prior Approval - Criteria	Evidence	Comments
5	<i>ENT</i>			
5.1 NEW	Adenoidectomy	<p>Commissioned only in either of the following clinical situations.</p> <p><u>In Children</u> For the treatment of obstructive sleep apnoea or upper airways resistance syndrome in combination with tonsillectomy.</p> <p>In conjunction with grommet insertion where there are significant nasal symptoms, in order to prevent repeat grommet insertion for the treatment of glue ear or recurrent otitis media.</p> <p>Adenoidectomy is not commissioned as an isolated procedure.</p>	<p>Tonsillectomy and Adenoidectomy in Children with Sleep Related Breathing Disorders – The Royal College of Anaesthetists - July 2010.</p> <p>Adenoidectomy for recurrent or chronic nasal symptoms in children The Cochrane Library 2010.</p> <p>Adenoidectomy for otitis media in children The Cochrane Library 2010.</p> <p>Updated systematic review of tonsillectomy and adenoidectomy for treatment of paediatric obstructive sleep apnoea/hypopnea syndrome (Structured abstract) Centre for Reviews and Dissemination 2013.</p> <p>NICE “Do not do” recommendation: “Once a decision has been taken to offer surgical intervention for otitis media with effusion (OME) in children, insertion of ventilation tubes is recommended. Adjuvant adenoidectomy is not recommended in the absence of persistent and/or frequent upper respiratory tract symptoms.”</p>	

	Treatment/ Procedure	Exceptionality - Prior Approval - Criteria	Evidence	Comments
5.2	Pinnaplasty – for Correction of Prominent Ears	<p>May be commissioned in the following circumstances:</p> <ul style="list-style-type: none"> • The patient should be between 5 and 19 years of age. • Patient assessed by plastic or ENT surgeon who has the option to refer, when appropriate to a specialist paediatric psychologist. <p>If there is evidence of psychological distress likely to be alleviated by surgery, prior approval is not required .</p> <p>Incisionless otoplasty is not commissioned.</p>	<p>Pinnaplasty Department of Health (2007).</p> <p>Local PCT consensus - review conducted 2007.</p> <p>Modernisation Agency's Action on Plastic Surgery 2005.</p> <p>IPG 422: Incisionless otoplasty NICE 2012.</p> <p>Commissioning Guide: Pinnaplasty Royal College of Surgeons (2013).</p>	<p>Children under the age of five are usually oblivious and referrals may reflect concerns expressed by the parents rather than the child.</p> <p>Ear prominence is very common and can lead to low self-esteem, bullying and significant psychological morbidity particularly in childhood and adolescence.</p>

5.3	<p>Insertion of grommets for Glue Ear (Otitis media with effusion)</p>	<p>The CCG will commission treatment with grommets / Myringotomy for children with otitis media with effusion (OME) where:</p> <p>There is also a history of recurrent acute otitis media (RAOM) defined as 3 or more acute infections in 6 months or at least 4 in a year.</p> <p>Or</p> <p>There has been a period of at least three months watchful waiting from the date of diagnosis of OME (by a GP/primary care referrer/audiologist/ENT surgeon).</p> <p>AND</p> <ul style="list-style-type: none"> • OME persists after three months AND • the child (who must be over three years of age) suffers from persistent bilateral OME with a hearing level in the better ear of 25-30 dBHL (averaged at 0.5, 1, 2 and 4kHz) or worse confirmed over 3 months. <p>OR</p> <p>Persistent bilateral OME with hearing loss Less than 25-30 dBHL (averaged at 0.5, 1, 2 and 4kHz) and with significant impact on the child's developmental, social or educational status.</p> <p>Children with Downs Syndrome are normally fitted with Hearing Aids.</p> <p>Management of children with cleft palate is under specialist supervision.</p> <p>Do Not perform adenoidectomy at the same time unless evidence of significant upper respiratory tract symptoms see Section 5.1 Adenoidectomy.</p>	<p><u>Commissioning Guide: Otitis Media with Effusion</u> Royal College of Surgeons (2013).</p> <p>NICE Pathway – Surgical management of Otitis Media with effusion in children (2012).</p> <p><u>CG60 Surgical management of children with otitis media with effusion (OME)</u> (February 2008). The advice in the NICE guideline covers:</p> <ul style="list-style-type: none"> •the surgical management of OME in children younger than 12 years. •guidance for managing OME in children with Down's syndrome and in children with all types of cleft palate. <p>It does not specifically look at the management of OME in:</p> <ul style="list-style-type: none"> •children with other syndromes (for example, craniofacial dysmorphism or polysaccharide storage disease). •children with multiple complex needs. <p>Grommets (ventilation tubes) for hearing loss associated with otitis media with effusion in children - Cochrane Ear, Nose and Throat Disorders Group 2010.</p> <p>http://pathways.nice.org.uk/pathways/surgical-management-of-otitis-media-with-effusion-in-children-path=view%3A/pathways/surgical-management-of-otitis-media-with-effusion-in-children/assessment-and-treatment-for-children-with-otitis-media-with-effusion-without-downs-syndrome-or-cleft-palate.xml&content=view-node%3Anodes-surgical-interventions</p>	
-----	--	---	---	--

5.4	Tonsillectomy for Recurrent Tonsillitis (excluding peri-tonsillar abscess) adults and children	<p>Sore throats are due to acute tonsillitis. The episodes of sore throat are disabling and prevent normal function.</p> <p>Tonsillectomy will only be commissioned where:</p> <ul style="list-style-type: none"> • Seven or more well documented clinically significant adequately treated sore throats in the preceding year; or • Five or more such episodes in each of the previous two years; or • Three or more such episodes in each of the preceding three years. <p>Is commissioned if appropriate following peri-tonsillar abscess.</p> <p>Tonsillectomy is not commissioned for tonsil stones or halitosis.</p> <p>Tonsillectomy may be appropriate for significant hypertrophy causing OSA.</p> <p>Tonsillectomy is recommended for severe recurrent sore throats in adults</p>	<p>Scottish intercollegiate guidelines network. Management of sore throat and indications for tonsillectomy (April 2010) Guideline 117.</p> <p>Tonsillectomy or adeno-tonsillectomy versus non-surgical treatment for chronic/recurrent acute tonsillitis - Cochrane Ear, Nose and Throat Disorders Group (2008).</p> <p>Evidence note 23: Tonsillectomy for recurrent bacterial tonsillitis – Health Improvement Scotland (2008).</p> <p>Tonsillectomy or adeno-tonsillectomy effective for chronic and recurrent acute tonsillitis – Cochrane Pearls 2009.</p> <p>Commissioning Guide: Tonsillectomy Royal College of Surgeons guidance.</p>	<p>Watchful waiting is more appropriate than tonsillectomy for children with mild sore throats.</p>
5.5	Surgical Remodelling of External Ear Lobe.	This is not routinely commissioned.	Modernisation Agency's Action on Plastic Surgery 2005.	Correction of split earlobes is not always successful and the earlobe is a site where poor scar formation is a recognised risk.

5.6 NEW	Use of Sinus X-ray	X-rays of sinuses are not routinely commissioned.	BSACI guidelines for the management of rhinosinusitis and nasal polyposis Clinical & Experimental Allergy Volume 38, Issue 2, Article first published online: 20 DEC 2007. NHS Choices Sinusitis Commissioning Guide: Rhinosinusitis Royal College of Surgeons (2013).	
5.7	Rhinoplasty - Surgery to Reshape the Nose.	This procedure is NOT available under the NHS on cosmetic grounds. Only commissioned in any of the following circumstances: <ul style="list-style-type: none"> • Objective nasal deformity caused by trauma. • Problems caused by obstruction of nasal airway. • Correction of complex congenital conditions e.g. cleft lip and palate. 		Patients with isolated airway problems (in the absence of visible nasal deformity) may be referred initially to an Ear Nose and Throat (ENT) consultant for assessment and treatment.
5.8 NEW	Surgery of Laser Treatment of Rhinophyma	Not routinely commissioned.	Nuances in the management of rhinophyma Facial Plastic Surgery, 2012 Apr;28(2):231-7. http://www.patient.co.uk/doctor/Rosacea-and-Rhinophyma.htm Information for Commissioners of Plastic Surgery Services:Referrals and Guidelines in Plastic Surgery NHS Modernisation Agency 2009 (page 17).	The first-line treatment of this condition of the nasal skin is medical. However response is poor. Severe cases that do not respond to medical treatment may be considered for surgery or laser treatment in exceptional circumstances.

6	Equipment			
6.1 NEW	Use of Lycra Suits	Lycra Suits are not normally commissioned for postural management of cerebral palsy.	<p>What is the clinical and cost effectiveness of dynamic elastomeric fabric orthoses (DEFOs) for cerebral palsy? Health Improvement Scotland, May 2013.</p> <p>This following pdf document can be accessed at the following link: http://www.cheshiremerseysidecsu.nhs.uk/Downloads/Comm-Policy-Review/SupportingDocs/6_1Defos.pdf</p>  <p>Lycra splints TSC May 2013.pdf</p> <p>Do lycra garments improve function and movement in children with cerebral palsy? BestBets, 2010.</p>	Any application for exceptional funding should include a comprehensive assessment of the child's postural management needs with clear outcome goals and time frames.
7	Fertility			
7.1	Infertility treatment For Sub fertility e.g medicines, surgical procedures and assisted conception. This also includes Reversal of Vasectomy or Female Sterilisation	<p>Draft Cheshire & Merseyside policy.</p> <p>The draft pdf can be accessed at the following link http://www.cheshiremerseysidecsu.nhs.uk/Downloads/Comm-Policy-Review/SupportingDocs/7_1InfertilityPolicy.pdf</p>  <p>Cheshire Mersey Infertility Draft Policy</p> <p>New Draft policy out for engagement.</p>	<p>CG156 Fertility: Assessment and treatment for people with fertility problems – NICE 2013.</p> <p>Contraception – sterilization – NICE Clinical Knowledge Summaries 2012 http://cks.nice.org.uk/#azTab</p>	Proposed new Draft policy subject to CCG approval.
8	Gastroenterology			

8.1	Gastro-electrical Stimulation	NHS England Guidance is that this procedure is NOT commissioned.	<p>Gastroelectrical stimulation for gastroparesis NICE IPG 103 – December 2004.</p> <p>EndoStim LES Stimulation System for severe gastro-oesophageal reflux – NIHR (2013).</p> <p>Commissioning Guide: Gastro-oesophageal reflux disease (GORD) Royal College of Surgeons (2013).</p> <p>NHS England Guidance NHSCB/B11/PS/a</p>	
9 General Surgery				
9.1	Haemorrhoidectomy - Rectal Surgery: & Removal of Haemorrhoidal Skin Tags	<p>Surgery commissioned for symptomatic :</p> <ul style="list-style-type: none"> • Grade III and IV haemorrhoids. • Grade I or II haemorrhoids if they are large, symptomatic, and have not responded to the following non-surgical or out-patient treatments – <ul style="list-style-type: none"> - Diet modification to relieve constipation. - Topical applications. - Stool softeners and laxatives. - Rubber band ligation. - Sclerosant injections. - Infrared coagulation. <p>Surgical treatment options include:</p> <ul style="list-style-type: none"> • Surgical excision (haemorrhoidectomy). • Stapled haemorrhoidopexy. • Haemorrhoidal artery ligation. <p>Removal of Skin tags should not ordinarily be performed.</p>	<p>Haemorrhoidal artery ligation NICE 2010.</p> <p>TAG128: Stapled haemorrhoidopexy for the treatment of haemorrhoids NICE 2007.</p> <p>BMJ2008. Clinical Review: Management of Haemorrhoids. Austin G Acheson, John H Scholefield, BMJ 2008; 336:380.</p> <p>Stapled versus conventional surgery for haemorrhoids – Cochrane Colorectal Cancer Group 2008.</p> <p>Long-term Outcomes of Stapled Hemorrhoidopexy vs Conventional HemorrhoidectomyA Meta-analysis of Randomized Controlled Trials – JAMA Surgery March 16, 2009, Vol 144, No. 3.</p> <p>Practice parameters for the management of hemorrhoids – Agency for Health Care Research and Quality (2010) US.</p>	There is some evidence of longer term efficacy of conventional haemorrhoidectomy over stapled procedure. Short term efficacy and cost effectiveness is similar.

			<p>Management of haemorrhoids BMJ 2008;336:380.</p> <p>Haemorrhoids NICE Clinical Knowledge Summaries 2012 http://cks.nice.org.uk/#azTab</p> <p>Commissioning Guide: Rectal bleeding Royal College of Surgeons (2013).</p>	
9.2	<p>Surgery for treatment of Asymptomatic Incisional and Ventral Hernias.</p> <p>Surgical correction of Diastasis of the Recti</p>	<p>Surgery: not commissioned if no symptoms, easily reducible (i.e. can be 'pushed back in') and not at significant risk of complications.</p> <p>Diastasis of the recti are unsightly but do not carry a risk of complications and surgical results can be imperfect.</p>	<p>Commissioning Policy For Procedures Of Limited Clinical Value NHS Derby City and NHS Derbyshire County (April 2011).</p> <p>A systematic review on the outcomes of correction of diastasis of the recti Hernia ,December 2011, Volume 15, Issue 6, pages 607-614, Hickey et al.</p>	
9.3 NEW	Surgery for Asymptomatic Gallstones	This procedure is not routinely commissioned.	Commissioning Guide: Gallstone disease Royal College of Surgeons (2013).	<p>This procedure is considered a Low clinical priority for <u>asymptomatic</u> gallstones. Asymptomatic gallstones are usually diagnosed incidentally when they are seen on imaging which is done for some unrelated reasons.</p>

	Lithotripsy for Gallstones	Lithotripsy not routinely commissioned.		Lithotripsy rarely performed as rate recurrence high.
10	<i>Gynaecology</i>			
10.1	Surgical Procedures – for the Treatment of Heavy Menstrual Bleeding Hysterectomy D&C (Dilatation and curettage)	Hysterectomy not commissioned unless all of the following requirements have been met: <ul style="list-style-type: none"> An unsuccessful trial with a levonorgestrel intrauterine system (e.g. Mirena) unless medically contra-indicated or the woman has made an informed choice not to use this treatment. The following treatments have failed, are not appropriate or are contra-indicated in line with NICE guidance. <ul style="list-style-type: none"> Tranexamic acid or nonsteroidal anti-inflammatory drugs or combined oral contraceptives. Norethisterone (15mg) daily from days 5 to 26 of the menstrual cycle, or injected long-acting progestogens. Endometrial ablation has been tried (unless patient has fibroids >3cm). Dilatation and curettage not commissioned as a diagnostic or therapeutic procedure.	CG44 Heavy menstrual bleeding: full guideline NICE 2007. QS47 Heavy Menstrual Bleeding NICE 2013.	
11	<i>Mental Health</i>			
11.1 NEW	Counselling Services for Hearing Impaired Adults with Mental Health Problems.	Patients with hearing problems (who use sign language) and who need specialist counselling and support will be considered on a case by case basis. Some CCGs commission the service from non NHS providers.	Specialised Mental Health Services for the deaf NHS England. Mental Health and Deafness: Towards Equity and Access Department of Health 2005. Mental Health of Deaf People Lancet 2012; 379: 1037–44.	CCGs commission primary care based psychological services such as IAPT (Improving Access to Psychological Therapies), which are accessible by Deaf patients either via providing appropriate interpreting services and technology (to implement their Equality Duty (Equality Act 2010) or via commissioning

				services specifically designed for Deaf patients.
11.2 NEW	Inpatient Care for treatment of Chronic Fatigue Syndrome (CFS).	In patient care for Chronic Fatigue Syndrome is not routinely commissioned. If in-patient treatment is recommended an IFR referral will be required.	Chronic fatigue syndrome/myalgic encephalomyelitis (or encephalopathy): diagnosis and management of CFS/ME in adults and children – NICE 2007, CG53. Cognitive behaviour therapy for chronic fatigue syndrome in adults - Cochrane Depression, Anxiety and Neurosis Group 2008. Adaptive pacing, cognitive behaviour therapy, Graded exercise, and specialist medical care for chronic fatigue syndrome: A cost-effectiveness analysis - . PLoS ONE 7(8): e40808. doi:10.137. Cost-effectiveness of counselling, graded-exercise and usual care for chronic fatigue: evidence from a randomised trial in primary care - BMC Health Services Research 2012, 12:264.	Care of persons with CFS should take place in a community setting under the care of a specialist in CFS if necessary. NICE section 1.915 states: Most people with CFS will not need hospital admission. However, there may be circumstances when a planned admission should be considered. The decision to admit should be made with the person with CFS and their family, and be based on an informed consideration of the benefits and disadvantages. For example, a planned admission may be useful if assessment of a management plan and investigations would require frequent visits to the hospital.
11.3	Treatment of Gender Dysphoria	Patients with Gender Dysphoria issues should be referred to the Gender Identity Clinic (GIC) at Charring Cross. It is no longer necessary to access local services for assessment. Core surgery is commissioned by NHS England but there are a number of non- core treatments which will need consideration for funding by the CCG. These requests should be made by the GIC only and considered on an individual basis.	NHS England interim protocol – NHS England (2013) Pages 13 & 14 describe non -core NHS England & CCG commissioning responsibilities.	Where the provision of “non-core surgery” is appropriate the GIC should apply for treatment funding through the CCG.
11.4 NEW	Non-NHS Drug and Alcohol Rehabilitation	These treatments will only be funded on the advice of the Community Alcohol and Drugs Teams of the	Interventions to reduce substance misuse among vulnerable young people –	

	(Non-NHS commissioned services)	Cheshire and Wirral Partnership Foundation Trust.	<p>NICE Public Health Guidance 4 (2007)</p> <p>Drug misuse: psychosocial interventions – NICE Clinical Guideline 51 (2007).</p> <p>Alcohol-use disorders: diagnosis, assessment and management of harmful drinking and alcohol dependence – NICE Clinical Guideline 115 (2011).</p>	
11.5 NEW	Private Mental Health (MH) Care - Non-NHS commissioned services including Psychotherapy Adult Eating Disorders General In-patient Care Post-Traumatic Stress Adolescent Mental Health	<p>This will not normally be funded.</p> <p>Most Mental health conditions can be managed in the community with input from Community Mental Health Teams.</p> <p>NHS England Specialist Commissioning provides specialist services for various conditions including PTSD, eating disorders and severe OCD.</p> <p>There is also a specialist NHS MH service provided for affective disorders.</p> <p>A request for private MH care should be initiated by a consultant psychiatrist and give full explanation as to why NHS care is inappropriate or unavailable.</p>	<p>Veterans' post traumatic stress disorder programme (Adult) Service Specification NHS England Specialised Commissioning 2013.</p> <p>Post-traumatic stress disorder (PTSD):The management of PTSD in adults and children in primary and secondary care NICE Clinical Guideline 26 (2005).</p> <p>Severe OCD and body dysmorphic disorder service (Adults and Adolescents) Service Specification NHS England Specialised Commissioning (2013)</p> <p>The use of motivational interviewing in eating disorders: a systematic review. Psychiatry Research, 2012 Nov 30;200(1):1-11.</p> <p>Depression in children and young people: Identification and management in primary, community and secondary care. NICE Clinical Guideline 2005.</p> <p>Psychosis and schizophrenia in children and young people: Recognition and management. NICE Clinical Guideline 2013.</p>	

12	<i>Neurology</i>			
12.1 NEW	Bobath Therapy	Bobath Therapy is not routinely commissioned by the NHS. The evidence base is poor for both children and adults.	<p>The Effectiveness of the Bobath Concept in Stroke Rehabilitation: What is the Evidence? Stroke, 2009; 40:e89-e97.</p> <p>Can physiotherapy after stroke based on the Bobath Concept result in improved quality of movement compared to the motor relearning programme Physiotherapy Research International Volume 16, Issue 2, pages 69–80, June 2011.</p> <p>Bobath Concept versus constraint-induced movement therapy to improve arm functional recovery in stroke patients: a randomized controlled trial Clinical Rehabilitation, 2012 Aug;26(8):705-15.</p> <p>Bobath Therapy for Cerebral palsy Cambridge CCG (2013).</p> <p>A rapid review of the evidence for the effectiveness of Bobath therapy for children and adolescents with cerebral palsy National Public Health Service for Wales (2008).</p>	
12.2 NEW	Trophic Electrical Stimulation for Facial/Bells Palsy	Not routinely commissioned.	<p>Physical therapy for Bell's palsy (idiopathic facial paralysis). Cochrane Database of Systematic Reviews. Issue 12 (2011).</p>	

12.3 NEW	Functional Electrical Stimulation (FES)	Commissioned for foot drop of central neurological origin, such as stroke, MS, spinal cord injury. It is not routinely commissioned for lower motor neurone lesions. It is under review by NICE for dysphagia and muscle recovery chronic disease.	<p>Functional Electric Stimulation (FES) for Children with Cerebral Palsy: Clinical Effectiveness – CADTH Rapid Response Service, 2011.</p> <p>Children with cerebral palsy: a systematic review and meta-analysis on gait and electrical stimulation. Clinical Rehabilitation. 2010 Nov; 24(11):963-78.</p> <p>Interventions for dysphagia and nutritional support in acute and subacute stroke Cochrane Database of Systematic Reviews 2012, Issue 10.</p> <p>Functional electrical stimulation for drop foot of central neurological origin NICE, 2009.</p> <p>Functional electrical stimulation for rehabilitation following spinal cord injury Centre for Reviews and Dissemination, NIHR, 2011.</p>	
13	<i>Ophthalmology</i>			
13.1	Upper Lid Blepharoplasty - Surgery on the Upper Eyelid.	Only commissioned in the following circumstances: <ul style="list-style-type: none"> • Eyelid function interferes with visual field. 	<p>Eyelid Surgery <i>The British Association of Aesthetic Plastic Surgeons 2011.</i></p> <p>Modernisation Agency's Action on Plastic Surgery 2005.</p> <p>Procedures of Limited Clinical Effectiveness Phase 1 - Consolidation and repository of the existing evidence-base London Health Observatory 2010.</p>	Excess skin in the upper eyelids can accumulate due to the ageing and is thus normal. Hooded lids causing significant functional impaired vision confirmed by an appropriate specialist can warrant surgical treatment. Impairment to visual field to be documented.

13.2	Lower Lid Blepharoplasty - Surgery on the Lower Eyelid.	<p>Only commissioned in any of the following circumstances:</p> <ul style="list-style-type: none"> • Correction of ectropion or entropion which threatens the health of the affected eye. • Removal of lesions of eyelid skin or lid margin. • Rehabilitative surgery for patients with thyroid eye disease. 	<p>Eyelid Surgery The British Association of Aesthetic Plastic Surgeons 2011.</p> <p>Local PCT consensus –review conducted 2007.</p> <p>Modernisation Agency’s Action on Plastic Surgery 2005.</p> <p>Procedures of Limited Clinical Effectiveness Phase 1 - Consolidation and repository of the existing evidence-base - London Health Observatory 2010.</p>	Excessive skin in the lower lid may cause “eye bags” but does not affect function of the eyelid or vision and therefore does not need correction.
13.3	Surgical Treatments for Xanthelasma Palpebrum (fatty deposits on the eyelids).	<p>Only commissioned for: larger lesions which satisfy all of the following:</p> <ol style="list-style-type: none"> 1. not responded to treatment for underlying familial lipoprotein lipase deficiency 2. failed topical treatment 3. Causing significant disfigurement 4. Causing functional impairment. <p>Topical treatments may be available in a Primary care or Community setting.</p>	<p>Local PCT consensus – review conducted 2007.</p> <p>DermNet NZ information resources updated Jan 2013.</p> <p>Commissioning Criteria – Plastic Surgery Procedures of Low Clinical Priority/ Procedures not usually available on the National Health Service Health Commission Wales (2008).</p> <p>http://www.patient.co.uk/doctor/xanthelasma</p>	<p>The following treatments should be considered for patients with xanthelasma: Many Xanthelasma may be treated with topical trichloroacetic acid (TCA) or cryotherapy. Xanthelasma may be associated with abnormally high cholesterol levels and this should be tested for before referral to a specialist. Patients with xanthelasma should always have their lipid profile checked before referral to a specialist. Investigation for underlying lipid abnormalities should be undertaken in the first instance. Lesions are harmless. Many Xanthelasma may be treated with topical trichloroacetic acid (TCA) or cryotherapy.</p>

13.4 NEW	Surgery or Laser Treatment for Short Sightedness (Myopia) or long sightedness (hypermetropia)	Surgery or Laser Treatment for Short Sightedness or long sightedness is <u>not</u> commissioned. Glasses are lower risk and more cost effective.		
13.5 NEW	Cataract Surgery	CCGs currently have agreed clinical pathways with Optometrists.	<p>Thresholds for cataract surgery – Shropshire and Telford Hospital NHS Trust, 2012.</p> <p>Shropshire CCG POLICY ON LOW PRIORITY TREATMENTS Version 13 – June 2013 Based on OPCS 4.6 and ICD 10 8.2 Cataract surgery pg38.</p> <p>Cataract surgery Hull CCG, 2012.</p> <p>NHS Atlas of Variation, (cataract spend, cataract admissions)</p> <p>Don't turn back the clock: Cataract surgery - the need for patient centred care. RNIB / Royal College of Ophthalmologists (2011).</p> <p>Cataract surgery guidelines The Royal College of Ophthalmologists (RCOphth) 2010.</p> <p>Action on cataracts good practice guidance Department of Health (2000).</p> <p>Cataract care pathway Map of Medicine (2013).</p> <p>NHS UK - http://www.nhs.uk/conditions/Cataracts-age-related/Pages/Introduction.aspx</p>	<i>Further public health work in this area is being undertaken.</i>

13.6 NEW	Coloured (Irlens) Filters for treatment of Dyslexia	There is insufficient evidence of efficacy on this treatment. It is not routinely commissioned until such time when there is robust evidence.	Coloured filters for reading disability:A systematic review WMHTAC 2008	
13.7 NEW	Intra ocular telescope for advanced age-related macular degeneration	This is not routinely commissioned as there is limited published evidence of effectiveness.	Implantation of miniature lens systems for advanced age-related macular degeneration NICE, 2008. Intraocular telescope by Vision Care™ for age-related macular degeneration North East Treatment Advisory Group (2012).	
13.8	Surgical removal of Chalazion or Meibomian Cysts	Referral to secondary care will only be considered when all of the following are met: <ul style="list-style-type: none"> • Present for six months or more. • Conservative treatment has failed. • Sited on upper eyelid. AND Causes blurring or interference with vision. OR Has required treatment with antibiotics due to infection at least twice in the preceding six months. In Children under 10 this is commissioned as visual development may be at risk.	Guidance for the management of referrals for Meibomian Cysts NHS Cornwall & Isles of Scilly Devon, Plymouth and Torbay (January 2013).	
14	Oral Surgery			
14.1	Extraction of impacted Wisdom Teeth.	Commissioned by NHS England in accordance with their policy document.	TA1 Guidance on the Extraction of Wisdom Teeth NICE (2000). Procedures of Limited Clinical Effectiveness	Impacted Wisdom teeth free from disease should not be operated on.

			<p>Phase 1 - Consolidation and repository of the existing evidence-base London Health Observatory 2010.</p> <p>Removal of impacted teeth Centre for Review and Dissemination 2010.</p> <p>Surgical removal versus retention for the management of asymptomatic impacted wisdom teeth Cochrane Oral Health Group (2012).</p> <p>NHS England Removal of Third molars NHS England 2013</p>	
14.2 NEW	Surgical Replacement of the Temporomandibular Joint Temporo-mandibular Joint Dysfunction Syndrome & Joint Replacement	<p>Only commissioned in the following circumstances: Any or a combination of the following symptoms are present:</p> <ul style="list-style-type: none"> - Restricted mouth opening <35mm). - Dietary score of < 5/10 (liquid scores 0, full diet scores 10). - Occlusal collapse (anterior open bite or retrusion). - Excessive condylar resorption and loss of height of vertical ramus. - Pain score > 5 out of 10 on visual analogue scale (and combined with any of the other symptoms). - Other significant quality of life issues. <p>AND</p>	<p>Surgical Replacement of the Temporomandibular Joint: Interim guidance for Merseyside and Wirral/Cheshire Commissioners when considering funding requests .</p> <p>See link to guidance(below)</p> <p>http://www.cheshiremerseysidecsu.nhs.uk/Downloads/Comm-Policy-Review/SupportingDocs/14_2TMJ.doc</p> <p> TMJ replacement guidance 20130806.c</p> <p>Total prosthetic replacement of the Temporomandibular joint (IPG329) NICE 2009</p>	

		Evidence that conservative treatments have been attempted and failed to adequately resolve symptoms and other TMJ modification surgery (if appropriate) has also been attempted and failed to resolve symptoms.	http://www.patient.co.uk/doctor/temporomandibular-joint-dysfunction-and-pain-syndromes	
14.3	Orthodontics	NHS orthodontic care is available to children under 18 if there is clinical need. NHS orthodontic care is not usually available for adults but may be approved on a case-by-case basis if it is needed for health reasons. Commissioned by NHS England.	Orthodontics - NHS Choices	
15	<i>Paediatrics</i>			
15.1 NEW	Cranial Banding for Positional Plagiocephaly	Not routinely commissioned.	Nonsurgical treatment of deformational plagiocephaly: a systematic review Archives of Pediatrics and Adolescent Medicine, Volume 162, Issue 8, 2008, p 719-27. What is the role of helmet therapy in positional plagiocephaly? BestBETS 2008.	This treatment is considered <u>low</u> priority. Most children's head shapes will improve naturally in their own time.
16	<i>Plastic & Cosmetic Surgery</i>			
16.1	Reduction Mammoplasty - Female Breast Reduction	Commissioned only if all of the following circumstances are met: Musculo-skeletal symptoms are not due to other causes. And	Procedures of Limited Clinical Effectiveness Phase 1 - Consolidation and repository of the existing evidence-base London Health Observatory 2010. Commissioning Criteria – Plastic Surgery. Procedures of Low Clinical Priority/	Best not performed on young teenagers and delayed until any planned family is complete. Unilateral reduction is preferable to unilateral augmentation.

		<p>There is at least a two year history of attending the GP with the problem.</p> <p>And</p> <p>Other approaches such as analgesia and physiotherapy have been tried.</p> <p>And</p> <p>The patient is suffering from functional symptoms as a result of the size of her breasts (e.g. candidal intertrigo; backache).</p> <p>And</p> <p>The wearing of a professionally fitted brassiere has not helped.</p> <p>And</p> <p>Patients BMI is <25 and stable for at least twelve months.</p> <p>And</p> <p>There is a proposed reduction of at least 500g per side.</p> <p>And</p> <p>It is envisaged there are no future planned pregnancies.</p> <p>Unilateral breast reduction is considered for asymmetric breasts of three or more cup size difference as measured by a specialist.</p>	<p>Procedures not usually available on the National Health Service Health Commission Wales (2008).</p> <p>Modernisation Agency's Action on Plastic Surgery 2005.</p> <p>Greenbaum, a. R., Heslop, T., Morris, J., & Dunn, K. W. (2003). <u>An investigation of the suitability of bra fit in women referred for reduction mammoplasty.</u> <i>British Journal of Plastic Surgery</i>, 56(3), 230–236.</p> <p>Wood, K., Cameron, M., & Fitzgerald, K. (2008). <u>Breast size, bra fit and thoracic pain in young women: a correlational study.</u> <i>Chiropractic & Osteopathy</i>, 16(1), 1–7.</p> <p><u>An investigation into the relationship between breast size, bra size and mechanical back pain</u> British School of Osteopathy (2010).</p>	
--	--	---	--	--

16.2	Augmentation Mammoplasty - Breast Enlargement	<p>Only commissioned in the following circumstance:</p> <p>The BMI is <25 and stable for at least twelve months.</p> <p>And any of the following:</p> <p>Unilateral breast enlargement is considered for breasts of three or more cup size difference as measured by a specialist.</p> <p>Congenital absence i.e. no obvious breast tissue.</p> <p>In special circumstances reconstructive surgery may be appropriate for tubular breast abnormality.</p>	<p>Dixon, J, et al, 1994, ABC of breast diseases: congenital problems and aberrations of normal breast development and involution, Br Med J, 309, 24 September, 797-800</p> <p>Freitas, R, et al, 2007, Poland's Syndrome: different clinical presentations and surgical reconstructions in 18 cases, Aesthet Plast Surg, 31, 140-46.</p> <p>Heimberg, D, et al, 1996, The tuberous breast deformity: classification and treatment, Br J Plast Surg, 49, 339-45.</p> <p>Pacifico, M, et al, 2007, The tuberous breast revisited, J Plast Reconstruct Aesthet Surg, 60, 455-64.</p> <p>North Derbyshire, South Derbyshire and Bassetlaw Commissioning Consortium, 2007, Norcom commissioning policy – specialist plastic surgery procedures”, 5-7.</p> <p>Sadove, C, et al, 2005, Congenital and acquired pediatric breast anomalies: a review of 20 years experience, Plast Reconstruct Surg, April, 115(4), 1039-1050.</p> <p>Vale of Glamorgan Local Health Board, 2006, Policy on the commissioning of procedures of low priority or limited clinical effectiveness not normally funded, Annex A, 3.36.</p> <p>Procedures of Limited Clinical Effectiveness Phase 1 - Consolidation and</p>	<p>Patients should be made aware that;</p> <p>1 in 5 implants need replacing within 10yrs regardless of make.</p> <p>Prior to implant insertion all patients explicitly be made aware of the possibilities of complications, implant life span, the need for possible removal of the implant at a future date and that future policy may differ from current policy.</p> <p>Patients should be made aware that implant removal in the future might not be automatically followed by replacement of the implant.</p> <p>Not all patients demonstrate improvement in psychosocial outcome measures following breast augmentation.</p>
------	---	--	--	---

			<p>repository of the existing evidence-base - London Health Observatory 2010.</p> <p>Health Commission Wales. 2008 Commissioning Criteria – Plastic Surgery. Procedures of Low Clinical Priority/ Procedures not usually available on the National Health Service</p> <p>Modernisation Agency's Action on Plastic Surgery 2005.</p>	
16.3	Removal and/or Replacement of Silicone Implants - Revision of Breast Augmentation	<p>Revisional surgery will ONLY be considered if the NHS commissioned the original surgery and complications arise which necessitates surgical intervention , such as:</p> <p>Capsule contraction causing significant deformity</p> <p>or</p> <p>Implant rupture.</p> <p>If revisional surgery is being carried out for implant failure, the decision to replace the implant(s) rather than simply remove them will be based upon the <u>clinical</u> need for replacement and whether the patient meets the policy for augmentation at the time of revision.</p>	<p>Procedures of Limited Clinical Effectiveness Phase 1 - Consolidation and repository of the existing evidence-base - London Health Observatory 2010.</p> <p>Health Commission Wales. 2008 Commissioning Criteria – Plastic Surgery. ---------------------	---	---	---

	Assisted Micromobilisation and Reflex Stimulation) Fusion	There is limited data on effectiveness and no data on superiority over other treatments. Fusion not commissioned unless the patient has completed an optimal package of care, including a combined physical and psychological treatment programme; over a period likely to be more than 12 months. And <ul style="list-style-type: none"> • Still has severe non-specific low back pain for which they would consider surgery. 	content/uploads/2012/10/21stCenturyBackCare.pdf Final TAMARS report[1].pdf	
18.2	Facet Joint and Epidural Injection	Referral to a pain intervention service may be appropriate for consideration of therapeutic injection of facet joints or epidural injection in patients with non-specific back pain of over 12 months duration or radicular pain failing to respond to conservative treatment as per the policy attached.	For a link to the pathways for patients with back pain please see link below http://www.cheshiremerseysidecsu.nhs.uk/Downloads/Comm-Policy-Review/SupportingDocs/18_2backpain.doc  Pathways for patients with Low Back	
18.3	Endoscopic Laser Foraminoplasty	This procedure is NOT routinely commissioned. Individual funding requests will need to be made for exceptional circumstances. Current evidence of the safety and efficacy of endoscopic laser foraminoplasty does not appear adequate to support the use of this procedure without special arrangements for consent and for audit or research.	IPG31 Endoscopic laser foraminoplasty: guidance NICE 2003 (confirmed 2009) Reviewed October 2011.	
18.4	Peripheral Nerve-field	This procedure is NOT routinely commissioned.	IPG 451: Peripheral nerve-field stimulation	

NEW	Stimulation (PNFS) for Chronic Low Back Pain	<p>Individual funding requests will need to be made for exceptional circumstances.</p> <p>Current evidence on the efficacy of peripheral nerve-field stimulation (PNFS) for chronic low back pain is limited in both quantity and quality, and duration of follow-up is limited. Evidence on safety is also limited and there is a risk of complications from any implanted device.</p>	<p>(PNFS) for chronic low back pain NICE 2013</p>	
18.5 NEW	Endoscopic Lumbar Decompression	<p>This procedure is NOT routinely commissioned. Individual funding requests will need to be made for exceptional circumstances.</p> <p>Current evidence on the safety and efficacy of percutaneous endoscopic laser lumbar discectomy is inadequate in quantity and quality.</p>	<p>IPG300: Percutaneous endoscopic laser lumbar discectomy NICE, 2009</p>	
18.6 NEW	Percutaneous Disc Decompression using Coblation for Lower Back Pain.	<p>This procedure is NOT routinely commissioned. Individual funding requests will need to be made for exceptional circumstances.</p> <p>Current evidence suggests that there are no major safety concerns associated with the use of percutaneous disc decompression using coblation for lower back pain. There is some evidence of short-term efficacy; however, this is not sufficient to support the use of this procedure without special arrangements for consent and for audit or research.</p>	<p>IPG 173: Percutaneous disc decompression using coblation for lower back pain. NICE 2006</p>	
18.7 NEW	Non-rigid Stabilisation Techniques	<p>This procedure is NOT routinely commissioned. Individual funding requests will need to be made for exceptional circumstances.</p>	<p>IPG 366: Non-rigid stabilisation techniques NICE 2010</p>	

		Current evidence on the efficacy of non-rigid stabilisation techniques for the treatment of low back pain shows that these procedures are efficacious for a proportion of patients with intractable back pain.		
18.8 NEW	Lateral (including extreme, extra and direct lateral) Interbody Fusion in the Lumbar Spine	<p>This procedure is NOT routinely commissioned. Individual funding requests will need to be made for exceptional circumstances.</p> <p>Current evidence on the safety and efficacy of lateral (including extreme, extra and direct lateral) interbody fusion in the lumbar spine is inadequate in quantity and quality. Therefore this procedure should only be used with special arrangements for clinical governance, consent and audit or research.</p>	IPG 321: Lateral (including extreme, extra and direct lateral) interbody fusion in the lumbar spine is inadequate in quantity and quality. NICE 2009.	
18.9 NEW	Percutaneous Intradiscal Laser Ablation in the Lumbar Spine	<p>This procedure is NOT routinely commissioned. Individual funding requests will need to be made for exceptional circumstances.</p> <p>Current evidence on the safety and efficacy of percutaneous intradiscal laser ablation in the lumbar spine is adequate to support the use of this procedure provided that normal arrangements are in place for clinical governance, consent and audit.</p>	IPG 357: Percutaneous intradiscal laser ablation in the lumbar spine NICE 2010.	
18.10 NEW	Transaxial Interbody Lumbosacral Fusion	<p>This procedure is NOT routinely commissioned. Individual funding requests will need to be made for exceptional circumstances.</p> <p>Current evidence on the efficacy of transaxial interbody lumbosacral fusion is limited in quantity but shows symptom relief in the short term in some patients. Evidence on safety shows that there is a risk of rectal perforation. Therefore this procedure</p>	IPG 387: Transaxial interbody lumbosacral fusion NICE 2011.	

		should only be used with special arrangements for clinical governance, consent and audit or research.		
18.11 NEW	Therapeutic Endoscopic Division of Epidural Adhesions	<p>This procedure is NOT routinely commissioned. Individual funding requests will need to be made for exceptional circumstances.</p> <p>Current evidence on therapeutic endoscopic division of epidural adhesions is limited to some evidence of short-term efficacy, and there are significant safety concerns. Therefore this procedure should only be used with special arrangements for clinical governance, consent and audit or research.</p>	IPG 333: Therapeutic endoscopic division of epidural adhesions NICE 2010	
18.12 NEW	Automated Percutaneous Mechanical Lumbar Discectomy.	<p>This procedure is NOT routinely commissioned. Individual funding requests will need to be made for exceptional circumstances.</p> <p>Current evidence suggests that there are no major safety concerns associated with automated percutaneous mechanical lumbar discectomy. There is limited evidence of efficacy based on uncontrolled case series of heterogeneous groups of patients, but evidence from small randomised controlled trials shows conflicting results. In view of the uncertainties about the efficacy of the procedure, it should not be used without special arrangements for consent and for audit or research.</p>	IPG 141: Automated percutaneous mechanical lumbar discectomy. Nov 2005.	
18.13 NEW	Prosthetic Intervertebral Disc Replacement in the Lumbar Spine	<p>This procedure is NOT routinely commissioned. Individual funding requests will need to be made for exceptional circumstances.</p>	<p>IPG 306: Prosthetic intervertebral disc replacement in the lumbar spine NICE 2009.</p> <p>Commissioning Guide – Low Back Pain. Royal College of Surgeons (2013).</p>	As effective as discectomy in the short term 2-3 yrs. but after that outcomes are similar. Long term follow-up data on efficacy and safety is lacking.

		Current evidence on the safety and efficacy of prosthetic intervertebral disc replacement in the lumbar spine is adequate to support the use of this procedure provided that normal arrangements are in place for clinical governance, consent and audit.	Total disc replacement for chronic back pain in the presence of disc degeneration The Cochrane Database of Systematic Reviews, Issue 9 (2012).	
18.14 NEW	Bone Morphogenetic Proteins Dibotermin alfa Eptotermin alpha	Dibotermin alfa is commissioned in the following situation: The treatment of acute tibia fractures in adults, as an adjunct to standard care using open fracture reduction and intramedullary unreamed nail fixation. Eptotermin alfa is commissioned in line with its licensed indication: Treatment of non-union of tibia of at least 9 month duration, secondary to trauma, in skeletally mature patients, in cases where previous treatment with autograft has failed or use of autograft is unfeasible.	Clinical effectiveness and cost-effectiveness of bone morphogenetic proteins in the non-healing of fractures and spinal fusion: a systematic review Health Technology Assessment NHS R&D HTA Programme, 2007. Clinical effectiveness and cost-effect... [Health Technol Assess. 2007] - PubMed - NCBI Annals of Internal Medicine Safety and Effectiveness of Recombinant Human Bone Morphogenetic Protein-2 for Spinal Fusion: A Meta-analysis of Individual-Participant Data June 2013 BMPs: Options, indications, and effectiveness – Journal of Orthopaedic Trauma . 2010 Mar;24 Suppl 1:S9-16.	
18.15	Surgery for trigger finger	Conservative management (including splinting, steroid injections, NSAIDS) is adequate in the majority of cases. Local steroid injections should be the first line treatment unless the patient is diabetic (where surgery preferred). Surgery not commissioned unless conservative treatments, (including at least 2 corticosteroid injections) have failed or are contraindicated	Nimigan AS, Ross DC, Bing SG. Steroid injections in the management of trigger fingers . American Journal of Physical Medicine and Rehabilitation 2006; 85(1):36-43. BMJ review: Akhtar S, Bradley MJ, Quinton DN, Burke FD. Management and referral for trigger finger/thumb . BMJ 2005; 331(7507):30-33. NHS Oxfordshire, Interim Treatment Threshold	

		<p>AND</p> <p>Fixed flexion deformity that cannot be corrected easily is present.</p>	<p>Statement: Surgery for trigger finger (stenosing tenovaginitis)</p> <p>Corticosteroid injection for trigger finger in adults Cochrane Database of Systematic Reviews (2008).</p> <p>Trigger Finger Assessment Map of Medicine (2012) – for North Mersey</p> <p>Surgery versus ultrasound-guided steroid injections for trigger finger disease: protocol of a randomized controlled trial Danish Medical Journal 2013;60(5):A4633.</p>

			Commissioning Guide: Painful tingling fingers Royal College of Surgeons (2013).	
18.21	Surgical Removal of Ganglion & Mucoïd Cysts at Distal Inter Phalangeal Joint (DIP).	<p>Only commissioned for mucoïd cysts under the following circumstance:</p> <p>Failure of conservative treatments including watchful waiting.</p> <p>AND any of the following</p> <ul style="list-style-type: none"> • Nail growth disturbed • Discharging, ulcerated or infected. • Size interferes with normal hand function. <p>Aspiration and Surgery for ganglion (open or arthroscopic) are not routinely commissioned.. Reassurance that no treatment is required should be given to the patient.</p>	<p>Digital Mucous Cyst Overview of condition – Medscape.</p> <p>South Central Priorities Committee Policy statement 152: Wrist ganglions Berkshire PCT, 2009.</p> <p>Ganglions of the hand and wrist: determinants of treatment choice – Journal of Hand Surgery 2013 Feb. v.38(2) p151-7.</p>	<p>50% may resolve.</p> <p>High risk of recurrence after any treatment. More radical surgery carries higher risks of complications.</p>
18.22 NEW	Hip Arthroscopy for Femoro–Acetabular Impingement.	<p>CCGs routinely commissions hip arthroscopy (from surgeons with specialist expertise in this type of surgery) in line with the requirements stipulated by NICE IPG 408, and only for patients who fulfil ALL of the following criteria:</p> <p>A definite diagnosis of hip impingement syndrome / femoro-acetabular impingement (FAI) has been made by appropriate investigations, X-rays, MRI and CT scans.</p> <p>An orthopaedic surgeon who specialises in young adult hip surgery has made the diagnosis in collaboration with a specialist musculoskeletal</p>	<p>IPG408 Arthroscopic femoro-acetabular surgery for hip impingement syndrome: guidance – NICE, 2011.</p> <p>Hip Arthroscopy for the treatment of symptomatic hip impingement syndrome in adults NHS Hull Clinical Commissioning Group 2012.</p> <p>Vijay D Shetty, Richard N Villar. Hip arthroscopy: current concepts and review of literature. British Journal of Sports Medicine, 2007;41:64–68.</p> <p>Macfarlane RJ, Haddad FS The diagnosis and management of femoro-acetabular</p>	<p>Current evidence on the efficacy of arthroscopic femoro–acetabular surgery for hip impingement syndrome is adequate in terms of symptom relief in the short and medium term.</p> <p>With regard to safety, there are well-recognised complications. Therefore this procedure may be used provided that normal arrangements are in place for clinical governance, consent and audit with local review of outcomes.</p>

		<p>radiologist.</p> <p>The patient has had severe FAI symptoms (restriction of movement, pain and 'clicking') or significantly compromised functioning for at least 6 months</p> <p>The symptoms have not responded to all available conservative treatment options including activity modification, drug therapy (NSAIDs) and specialist physiotherapy.</p>	<p>impingement. Annals of the Royal College of Surgeons of England, July 2010, vol/iss 92/5(363-7).</p> <p>Ng V Y et al.. Efficacy of Surgery for Femoro-acetabular Impingement: A Systematic Review. American Journal of Sports Medicine, November 2010,38 2337-2345.</p> <p>Commissioning Guide: Painful osteoarthritis of the hip Royal College of Surgeons (2013).</p> <p>IPG408 Arthroscopic femoro-acetabular surgery for hip impingement syndrome: guidance NICE, 2011</p>	
18.23 NEW	Surgical Removal of Bunions/ Surgery for Lesser Toe Deformity	<p>Requests for the removal of bunions will only be considered where; conservative methods of management* have failed. AND the patient suffers significant functional impairment** as a result of the bunions. AND radiographic evidence of joint damage (at point of referral).</p> <p>*Conservative measures include: Avoiding high heel shoes and wearing wide fitting leather shoes. Non surgical treatments such as bunion pads, splints, insoles or shields or exercise where appropriate.</p> <p>**Significant functional impairment is defined as: The patient complains of moderate to severe joint pain not relieved by extended non-surgical management AND has severe impact on their ability to undertake activities of daily living.</p>	<p>Bunions NICE Clinical Knowledge Summaries (2012)</p> <p>IPG 332: Surgical correction of hallux valgus using minimal access techniques NICE (2010)</p> <p>Commissioning Guide: Painful deformed great toe in adults Royal College of Surgeons (2013)</p>	

		Treatment will not be commissioned for cosmetic appearance only.		
18.24 NEW	Surgical Treatment of Morton's Neuroma	<p>Surgical Treatment is not routinely commissioned unless the patient has documented evidence that they are not responding to conservative treatments and the patient is experiencing significant pain or it is having a serious impact on their daily life and completed the following pathway.</p> <ol style="list-style-type: none"> 1. The patient should have had 3 months of conservative treatment in primary care such as footwear modification and metatarsal pads. 2. Been referred to an orthotist for an assessment. 3. Had a trial of local corticosteroid injection. 	<p>Therapeutic massage provides pain relief to a client with Morton's Neuroma: A case report - International Journal of Therapeutic Massage and Bodywork—Volume 5(2), June 2012.</p> <p>Clinical Inquiry. What is the best way to treat Morton's neuroma? - Journal of Family Practice 2011 v.60(3), p157-9.</p> <p>Morton's neuroma NICE Clinical Knowledge Summaries (2010).</p>	
18.25 NEW	Surgical treatment of Plantar Fasciitis	<p>Surgical Treatment is not routinely commissioned unless the following pathway has been followed:</p> <ol style="list-style-type: none"> 1. patient has documented evidence that they are not responding to conservative treatments 2. patient is experiencing significant pain or it is having a serious impact on their daily life and has completed the following 3. Three months of conservative therapy such as footwear modification, stretching exercises, ice packs, weight loss. 4. Been referred to a podiatrist or physiotherapist. 	<p>Heel pain--plantar fasciitis: clinical practice guidelines linked to the international classification of function, disability, and health from the orthopaedic section of the American Physical Therapy Association - Journal of Orthopaedic & Sports Physical Therapy. 2008;38(4):A1-A18.</p> <p>Plantar fasciitis NICE Clinical Knowledge Summaries (2009).</p> <p>Plantar fasciitis BMJ 2012;345:e6603.</p>	

		5. Been offered up to 3 corticosteroid injections 6 weeks apart.		
18.26 NEW	Treatment of Tendinopathies Extracorporeal Shock Wave Therapy Autologous Blood or Platelet Injection.	These treatments are not routinely commissioned for plantar fasciitis, achilles tendinopathy, refractory tennis elbow.	IPG 311: Extracorporeal shockwave therapy for refractory plantar fasciitis NICE 2009. IPG 312: Extracorporeal shockwave therapy for refractory Achilles NICE 2009. IPG 313: Extracorporeal shockwave therapy for refractory tennis elbow NICE 2009. IPG 437: Autologous blood injection for plantar fasciitis NICE 2013. IPG 438: Autologous blood injection for tendinopathy NICE 2013.	
19	Urology			
19.1 NEW	Circumcision	This not offered for social, cultural or religious reasons. However certain CCGs may have individual policies. Indicated for the following condition; <ul style="list-style-type: none"> ➤ balantix xerotica obliterans. ➤ traumatic foreskin injury/scarring where it cannot be salvaged. ➤ 3 or more episodes of balanitis/balanoposthis. ➤ Pathological phimosis. ➤ Irreducible paraphimosis. 	Male Circumcision: Guidance for Healthcare Practitioners Royal College of Surgeons, 2002. 2008 UK National Guideline on the Management of Balanoposthis – Clinical Effectiveness Group British Association for Sexual Health and HIV (2008). Balanitis NICE Clinical Knowledge Summaries 2009.	Race /cultural implications.

		<p>➤ Recurrent proven Urinary Tract Infections (UTIs) with an abnormal urinary tract.</p>	<p>I don't know, let's try some canestan: an audit of non-specific balanitis treatment and outcomes Sexually Transmitted Infections 2012;88:A55-A56.</p> <p>Balanitis Patient.co.uk.</p> <p>Commissioning Guide: Foreskin conditions Royal College of Surgeons guidance (2013).</p>	
19.2	Penile Implant: A surgical procedure to implant a device into the penis .	<p>Not routinely commissioned.</p> <p>For access to the document below please see following link: http://www.cheshiremerseysidecsu.nhs.uk/Downloads/Comm-Policy-Review/SupportingDocs/19_2PenileImplants.pdf</p> <p> 59 PenileImplants.pdf</p> <p>See attached sheet.</p>	<ol style="list-style-type: none"> 1. Penile implants NHS NWL policy 2012. 2. Telford and Wrekin CCG Penile Implants 2012. 3. Guidelines Male Sexual Dysfunction European Association Urology (2010). 4. Guidelines on the Management of ED British Society for Sexual Medicine(2007). 5. CG58: Prostate Cancer NICE 2008. 	<p>See attached discussion document re wording of policy.</p> <p>This discussion document can also be accessed via the following link: http://www.cheshiremerseysidecsu.nhs.uk/Downloads/Comm-Policy-Review/SupportingDocs/19_2penileimplants.doc</p> <p> Penile Implants Review.doc</p>
19.3 NEW	Reversal of Male Sterilisation	<p>The NHS does not commission this service. Patients consenting to vasectomy should be made fully aware of this policy. Reversal will be only considered in exceptional circumstances such as the loss of a child.</p>		<p>Cross reference to fertility policy.</p>

19.4 NEW	ESWT (Extracorporeal Shockwave Therapy) for Prostadynia or Pelvic Floor Syndrome	This is not commissioned as there is limited clinical evidence of effectiveness.	Guidelines on chronic pelvic pain European Association of Urology (2012).	
19.5 NEW	Hyperthermia Treatment for Prostadynia or Pelvic Floor Syndrome.	This is not commissioned as there is limited evidence of effectiveness.	Guidelines on chronic pelvic pain European Association of Urology (2012).	
19.6 NEW	Surgery for Prostatism	Only commissioned where there are sound clinical reasons and after failure of conservative treatments and in any of the following circumstances: <ul style="list-style-type: none"> ➤ International prostate symptom score >7; ➤ dysuria; ➤ post voided residual volume >150ml; ➤ recurrent proven Urinary Tract Infections (UTI); ➤ deranged renal function; ➤ Prostate-specific antigen (PSA) > age adjusted normal values. 	CG97: Lower urinary tract symptoms: The management of lower urinary tract symptoms in men NICE 2010. LUTS in men, age-related (prostatism) NICE Clinical Knowledge Summaries (2010). Commissioning Guide: LUTS Royal College of Surgeons (2013).	No references to treatment thresholds found.
20	Vascular			
20.1 NEW	Surgery for Extreme Sweating Hyperhidrosis – All areas Surgical Resection Endoscopic Thoracic Sympathectomy	Treatment is medical. Treatment of hyperhidrosis with surgery is not commissioned. Risk of compensatory hyperhidrosis elsewhere is very high.	Hyperhidrosis – NICE Clinical Knowledge Summaries (2013). Hyperhidrosis Patient.co.uk.	

20.2 NEW	Chelation Therapy for Vascular Occlusions	This is not commissioned.	<p>Diagnosis and management of Peripheral arterial disease: A national clinical guideline - SIGN, 2006.</p> <p>Effect of Disodium EDTA Chelation Regimen on Cardiovascular Events in Patients With Previous Myocardial Infarction The TACT Randomized Trial JAMA. 2013;309(12):1241-1250.</p>	A recent trial has been published showing some modest benefit post MI but concluded evidence was not sufficient to support routine use post MI.
20.3	Interventional treatments e.g. endothermal ablation, foam sclerotherapy and surgery for Varicose Veins.	<p>Treatment is in line with NICE CG168. For patients with symptomatic varicose veins having a significant impact on their activities of daily living the following pathway applies.</p> <p>Refer people to a vascular service^[1] if they have any of the following.</p> <ul style="list-style-type: none"> • Symptomatic^[2] primary or symptomatic recurrent varicose veins. • Lower-limb skin changes, such as pigmentation or eczema, thought to be caused by chronic venous insufficiency. • Superficial vein thrombosis (characterised by the appearance of hard, painful veins) and suspected venous incompetence. • A venous leg ulcer (a break in the skin below the knee that has not healed within 2 weeks). • A healed venous leg ulcer. <p>1. A team of healthcare professionals who have</p>	<p>CG168: Varicose Veins in the legs NICE 2013.</p> <p>Health Commission Wales. 2008 Commissioning Criteria – Plastic Surgery.
